MATHEWS COMPANY INTRODUCES M-C TRAX REMOTE DRYER MONITORING SYSTEM

Crystal Lake, IL- Mathews Company (M-C), a global manufacturer of grain dryers, announces its debut of a remote monitoring system for its grain dryer product line, M-C Trax.

M-C Trax allows grain producers to remotely monitor their grain dryer from any internet capable device. Due to increased demand for remote monitoring, producers can now have the option to check their dryer's performance while away from the dryer site.

"We recognize that many producers are juggling multiple tasks, especially during harvest season when the grain dryer is at its peak use, and they can't always be close to their dryer while it is operating," says Joseph Shulfer, Director of Engineering and Support Services.

"M-C Trax gives the producer assurance that the dryer is performing as expected. It allows them to check many operational parameters as well as be aware of any alarms, all without having to be physically standing next to the dryer's control cabinet. Additionally, this connectivity allows Mathews Company service personnel to monitor multiple dryers simultaneously, which aids in troubleshooting without having to actually be on site," he added.

The main M-C Trax features are: listing of current active alarms, set point and actual plenum temperature(s), set point and actual average mid-grain temperature, discharge mode of

operation, discharge grain moisture, and discharge grain temperature. All information is displayed in an easy-to-view design which is formatted for display on either a smart phone or a computer browser. If customers have multiple dryers, they will be able to view data simultaneously from a list of their dryers.

“M-C Trax, combined with the Pinnacle family of control systems introduced in 2010, is another example of an important technological advancement and demonstrates to customers that Mathews Company control systems are one of the best in the industry," says Shulfer.

Headquartered in Crystal Lake, IL (U.S.A), Mathews Company has been a leading manufacturer of high quality innovative agriculture equipment, specializing in grain drying since 1954. Mathews Company (M-C) “**M**eans **C**ommitment” and strives to provide superior products and unmatched service through innovation, expertise and quality. M-C dryers are available through authorized dealers worldwide. The company’s web address is www.mathewscompany.com.
